DETAILED ACTION

This Office Action is in response to the Amendment and Election of Species filed on November 10, 2005.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with David Steuber on February 1, 2006.

The application has been amended as follows:

In claim 37, line 16, after "across the" delete "second" and insert in its place - - source - - .

In claim 37, line 20, after "across the first and" delete "third" and insert in its place - - second drain - - .

In claim 49, line 2, after "concentration higher" insert - - than - - and after "a doping concentration of" insert - - the - - .

Allowable Subject Matter

Claims 37-53, 89, and 95-101 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art references, alone or in combination, do not show a trench gated MOSFET comprising a source mesa comprising: a high voltage drift region adjacent a body region and extending across a source mesa, the high voltage drift region having a second doping concentration of the second conductivity type; drain mesas comprising: a low voltage well of the second conductivity type adjacent the drain region and extending entirely across the drain mesas, respectively, the low voltage well having a fourth doping concentration of the second conductivity type; and a high voltage well of the second conductivity type, the high voltage well abutting the low voltage well in each of the drain mesas and the high voltage drift region, the high voltage well extending below a bottom of each of at least the second and third trenches, wherein a first doping concentration is greater than the second doping concentration and the third doping concentration is greater than the fourth doping concentration.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Baliga et al. (US 4,942,445) shows a semiconductor device having three mesas disposed within four trenches but does not show the high voltage

drift region, the low voltage well, and high voltage well disposed about the mesas nor each having the desired conductivity types and doping concentrations.
